

It took millions of years of wind and weather to evolve the soaring limestone and sandstone columns. When you visit, your eyes and camera will be amazed as you stand and look up to huge orange, pink, red and white layers of rock.

The thousands of odd-shaped spires, reaching to the skies just eight miles from Salt Lake City, are a eons-old geologic formation called a hoodoo. So, who do you believe should visit Bryce Canyon's hoodoo? You do!
