

Scientists say an interstellar object they named A/2017 U1, recently passed close enough to our planet to be seen on telescopes. It's the first time ever such a large object from outside our solar system has been so clearly visible. What would our scientists see if they could get a closer look at the strange vehicle?

We'd guess the aliens aboard would seem somewhat familiar. They'd be grey-haired, lounging on deck sunning themselves. Some would be playing shuffleboard, munching sandwiches and sipping drinks. The close-up scope could also see through the portholes, revealing others inside playing blackjack and video poker machines. The Earth scientists managed to interpret a sign in an alien language: ALL-INCLUSIVE SENIOR INTERSTELLAR CRUISE
